

AI tools for cybersecurity training providers

The gap

Hands-on lab time is limited and expensive - and it's easy to lose it to frustration or to effort spent on the wrong approach rather than real learning. Even the best lab setup can't tell an instructor, in real time, which student is stuck and needs help right now, so struggling students often aren't caught until that valuable practice time is already spent.

What the AI-Tutor does - our first product

The AI-Tutor sits alongside existing lab infrastructure and adds a real-time layer: it detects when a student is stuck, surfaces that to instructors live, and offers the student a progressive, Socratic-style hint instead of the answer outright.

Students

Less frustration, less stalled time

Hints escalate only as needed

Momentum preserved

Never handed the answer outright

Instructors

Full visibility across the whole cohort

See who's stuck without watching every screen

Less time on minor fixes

More time for real teaching moments

Program managers

Faster exercise completion

Shorter delivery time, same curriculum

Scale without sacrificing quality

Grow cohorts without growing headcount at the same pace

The AI-Tutor is the first in a broader set of tools we're building for training providers - happy to share more on the roadmap in conversation.

Where it stands today

Adaptly is post-MVP.

Live - Desktop monitoring agent

Live - Stuck-detection + hint backend

Live - Instructor dashboard

In progress - Moodle LMS integration (LTI)

In active conversation with design partners

What a design partnership looks like

A small number of design partners help shape the product against real cohort usage, in exchange for early access and favorable long-term terms - a chance to shape the roadmap of a tool built for hands-on cyber training, from someone who's delivered that training personally.

Next step

A short conversation to learn how you run training today and where the gaps are, walk through the platform live, and talk through what a pilot could look like for your cohort.
